Subject: TPC Information potholes

Good morning Jason et al,

I understand that everyone is busy and heavily engaged in this response. As indicated a few times since the incident occurred, there's some information potholes that seem to be slowing down or

So, here's an example of why we requested an executive summary of sorts about four days ago, and daily since.

This morning, I received a preliminary air monitoring report for TPC air monitoring over the last operational period. I searched my mailbox and found that I've received five of these (dated 11/29, 12/03, 12/05, 12/06, and 12/08) since the incident began. Waste accumulation information isn't provided daily.

Two factors of any response that inhibit a successful response are communication and information sharing. I expect that beginning on 12/09/19, EPA and members of the Unified Command will be provided a daily document that does not have any information potholes in it.

VR,
Adam
